section through the tailgate side of the longwall; and

(b) The procedures that will be followed if a ground failure prevents travel out of the section through the tailgate side of the longwall.

§75.220 Roof control plan.

- (a)(1) Each mine operator shall develop and follow a roof control plan, approved by the District Manager, that is suitable to the prevailing geological conditions, and the mining system to be used at the mine. Additional measures shall be taken to protect persons if unusual hazards are encountered.
- (2) The proposed roof control plan and any revisions to the plan shall be submitted, in writing, to the District Manager. When revisions to a roof control plan are proposed, only the revised pages need to be submitted unless otherwise specified by the District Manager.
- (b)(1) The mine operator will be notified in writing of the approval or denial of approval of a proposed roof control plan or proposed revision.
- (2) When approval of a proposed plan or revision is denied, the deficiencies of the plan or revision and recommended changes will be specified and the mine operator will be afforded an opportunity to discuss the deficiencies and changes with the District Manager.
- (3) Before new support materials, devices or systems other than roof bolts and accessories, are used as the only means of roof support, the District Manager may require that their effectiveness be demonstrated by experimental installations.
- (c) No proposed roof control plan or revision to a roof control plan shall be implemented before it is approved.
- (d) Before implementing an approved revision to a roof control plan, all persons who are affected by the revision shall be instructed in its provisions.
- (e) The approved roof control plan and any revisions shall be available to the miners and representative of miners at the mine.

[53 FR 2375, Jan. 27, 1988; 53 FR 11395, Apr. 6, 1988 as amended at 60 FR 33723, June 29, 1995; 71 FR 16668, Apr. 3, 2006]

§75.221 Roof control plan information.

- (a) The following information shall be included in each roof control plan:
- (1) The name and address of the company.
- (2) The name, address, mine identification number and location of the mine.
- (3) The name and title of the company official responsible for the plan.
- (4) A typical columnar section of the mine strata which shall—
- (i) Show the name and the thickness of the coalbed to be mined and any persistent partings:
- (ii) Identify the type and show the thickness of each stratum up to and including the main roof above the coalbed and for distance of at least 10 feet below the coalbed; and
- (iii) Indicate the maximum cover over the area to be mined.
- (5) A description and drawings of the sequence of installation and spacing of supports for each method of mining used.
- (6) When an ATRS system is used, the maximum distance that an ATRS system is to be set beyond the last row of permanent support.
- (7) When tunnel liners or arches are to be used for roof support, specifications and installation procedures for the liners or arches.
- (8) Drawings indicating the planned width of openings, size of pillars, method of pillar recovery, and the sequence of mining pillars.
- (9) A list of all support materials required to be used in the roof, face and rib control system, including, if roof bolts are to be installed—
- (i) The length, diameter, grade and type of anchorage unit to be used;
- (ii) The drill hole size to be used; and (iii) The installed torque or tension
- range for tensioned roof bolts.
 (10) When mechanically anchored
- tensioned roof bolts are used, the intervals at which test holes will be drilled.
- (11) A description of the method of protecting persons—
- (i) From falling material at drift openings; and
- (ii) When mining approaches within 150 feet of an outcrop.
- (12) A description of the roof and rib support necessary for the refuge alternatives.
